## **DETAILED ACTION**

### ***Change of Examiner***

1. Note the change of Examiner in the present application. The Art Unit number (1624) remains the same.

### ***Election/Restrictions***

2. Claim 7 remains withdrawn as being to a nonelected invention for the reasons of record. Pursuant to the further requirement for election of species, applicant has elected the process of preparing 2,4,6-triphenyl-1,3,5-triazine. The claims have been searched and examined to the extent of this elected species.

### ***Claim Rejections - 35 USC § 103***

3. Claims 1 and 3-6 are again rejected under 35 U.S.C. 103(a) as being unpatentable over Schnefer et al. in view of Alagy et al. and Schubert et al. for the reasons of record. Applicant's arguments have been considered but are not deemed persuasive of error in the present rejection. While unexpected results may be obtained for the specific reaction with the use of the specific porous bodies in the example in the specification, the claims are not so limited. Limitation of the claims to the preparation of 2,4,6-triphenyl-1,3,5-triazine using the specific porous bodies will overcome this rejection.

Art Unit: 1624

**Conclusion**

4. The Nakashima et al. patent (4,657,875) noted in the specification is additionally made of record. While this reference apparently discloses the specific porous bodies in the present specification, it does not teach their use in the triazine preparation. Note, however, that it does teach their application to micromixing broadly which would be applicable to the presently nonelected broad subject matter.
